Name of Action or Project: 460 Park Repositioning Project		
Project Location (describe, and attach a general location map): 460 Park Avenue, New York, NY, 10022		
Brief Description of Proposed Action (include purpose or need): Hahn Kook Center (U.S.A.) Inc. ("HKC") seeks an M-Core Program inducement to facilitate the repositioning of the 22-story office building located at 460 Park Avenue, a 13,556 square foot parcel of land that occupies the northwest corner of Park Avenue and East 57th Street. The project includes a 9,307 square foot expansion of the existing 282,801 gross square foot building (3.2%), new state-of-the-art mechanicals and top-flight amenities for today's office tenants. Work on the $200 million construction project will begin on 1/1/2026 and be completed in 24 months. An additional discretionary approval will be necessary to facilitate the project. Construction of the existing building was facilitated by a variance (287-53-BZ) issued by the NYC Board of Standards & Appeals ("BSA") in 1953, which allowed the then applicable loading berth requirements of the NYC Zoning Resolution ("ZR") to be waived. The project will also require HKC to seek a letter of no objection from the BSA to maintain the current loading berth waiver, or alternatively a waiver from the Department of Buildings Commissioner pursuant to ZR Sections 81-44 and 13-33. Each of the proposed actions qualify as Type II actions pursuant to Sections 617.5(c)(1), (2), (18) and (25) of the NYS Environmental Conservation Law.

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer "**Yes"** to a numbered question, please complete all the questions that follow in that section.
- If you answer "**No"** to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box "Moderate to large impact may occur."
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the "whole action".
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

Part 3 - Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:
To complete this section:

- Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design element or project changes.
- Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- Attach additional sheets, as needed.

The New York City Industrial Development Agency (NYCIDA), as Lead Agency for this review, has determined that the Project as described in the EAF parts 1 and 2 will not result in any significant adverse environmental impacts.

The attached expanded EAF part 3 provides reasons supporting this determination.

Determination of Significance - Type 1 and Unlisted Actions

SEQR Status: ☑ Type 1 ☐ Unlisted

Identify portions of EAF completed for this Project: ☑ Part 1 ☑ Part 2 ☑ Part 3

Upon review of the information recorded on this EAF, as noted, plus this additional support information
SHPO correspondence, Historic resources memo from applicant

and considering both the magnitude and importance of each identified potential impact, it is the conclusion of the
New York City Industrial Development Agency as lead agency that:

☑ A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

☐ B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will, therefore, be no significant adverse impacts from the project as conditioned, and, therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.7(d)).

☐ C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.

Dear Sam Justiniano:

Thank you for requesting the comments of the Division for Historic Preservation of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the submitted documents under the State Environmental Quality Review Act (SEQRA) as requested. These comments are those of the Division for Historic Preservation and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project.

We note that 460 Park Avenue is eligible to be listed in the State and National Registers of Historic Places (S/NRHP). Therefore, under SEQRA, our office as subject matter experts have reviewed the proposed project, and offer the following comments regarding potential impacts to architectural or archaeological resources:

1. Designed by the acclaimed architectural firm of Emery Roth & Sons, 460 Park Avenue is an intact example of a mid-century Manhattan skyscraper office building. As is typical of office buildings, the interior has been renovated multiple times over the years to suit the needs of various tenants. The exterior has had fewer changes and displays a higher level of integrity. As per the proposed drawings and rendering, our office does not recommend the over-cladding of the entire building. If this were to be reviewed under State or Federal preservation laws, it would be considered adverse.

Please be aware that if this project will involve state or federal permits, funding or licenses it may be subject to review under Section 14.09 of the NYS Parks, Recreation and Historic Preservation Law or Section 106 of the National Historic Preservation Act.

If further correspondence is required regarding this project, please be sure to refer to the OPRHP Project Review (PR) number noted above.

If you have any questions, you can call or e-mail me at the contact information below.

1.3 Findings, Opinions and Conclusions

Recognized Environmental Conditions & Significant Data Gaps

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-21 of the Subject Property as described in Section 2.2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report.

This assessment has revealed no recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) or significant data gaps (SDGs) in connection with the Subject Property.

RECOGNIZED ENVIRONMENTAL CONDITIONS
No RECs were identified.
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS
No CRECs were identified.
SIGNIFICANT DATA GAPS
No SDGs were identified.
RECOMMENDATIONS
No further investigation is recommended.

Historical Recognized Environmental Conditions (HRECs)

If identified, *historical recognized environmental conditions* (HRECs) in connection with the Subject Property are described below:

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS
No HRECs were identified.

De Minimis and Other Environmental Conditions

If identified, *de minimis* and other environmental conditions are described below:

OTHER ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS
Per review of historic Sanborn Fire Insurance Maps, the Property was historically improved with multiple mixed-use (store-dwelling) row buildings and a bank. While the historic buildings may have been equipped with heating oil tanks, given the 1954 redevelopment of the site with the present 22-story plus basement building, any historic tanks or impacts would have been removed during redevelopment. The above is therefore not considered a REC and no further investigation is recommended.
460 Park Avenue South is listed as being equipped with a 1969 installed 5,000-gallon, #2 heating oil aboveground storage tank. While the EDR Radius report plots the listing at the Property, it appears to be associated with Park Avenue SOUTH at the corner of East 31st Street. No vent-pipes or fill-ports were observed and based on observations and interviews no AST/USTs are present at the Property.

1.4 Business Environmental Risks / Non-ASTM Scope

Hillmann has performed a limited review of the following potential Business Environmental Risks (BER), also known as "Non-ASTM Scope concerns", in accordance with the contracted scope of work scope for this assessment. BER is defined by ASTM E1527-21 as "*a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.*" The following is a summary of findings for the limited review of potential BERs, where applicable, as per the contracted scope of work and limitations outlined in Section 2. For a more detailed discussion of the findings and contracted scope of work, please see the referenced report section.

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-21. The ASTM describes these methodologies as representing good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. § 9601) and petroleum products. This practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability ("landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the Subject Property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The goal of the processes established by ASTM E1527-21 is to identify *recognized environmental conditions* in connection with the Subject Property.

The term *recognized environmental condition* (REC) is defined by ASTM E1527-21 as "*(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*"

The term *controlled recognized environmental condition* (CREC) is a type of recognized environmental condition and defined by ASTM E1527-21 as a "*recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).*"

The term *historical recognized environmental condition* (HREC) is defined as a "*previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).*" The ASTM E1527-21 standard has clarified that a historical recognized environmental condition is not a recognized environmental condition.

The term *de minimis condition* is defined by the ASTM, "*…a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*" A condition determined to be a de minimis condition is not REC nor a CREC.

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Subject Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Subject Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historical record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Subject Property from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Subject Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-21 standard:

- Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Subject Property. If the Subject Property contains buildings built in 1990 or later, the contracted scope of work excludes a cursory non-intrusive visual screening or any other level of evaluation for suspect ACM; however, the exclusion for buildings built ≥1990 should not be interpreted to suggest that any such buildings are free of ACM or would not warrant evaluation of building materials for ACM prior to disturbance. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/ inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if a greater certainty is desired regarding ACM and potential asbestos hazards at the Subject Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

- Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Subject Property. If the Subject Property contains buildings built in 1980 or later, the contracted scope of work excludes any cursory non-intrusive visual screening or other level of evaluation for suspect LPB; however, the scope of work exclusion for building built ≥1980 should not be interpreted to suggest that any such buildings are free of LPB or other lead hazards. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Subject Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

- USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Subject Property.

- Mold/Microbial Damage: A cursory non-intrusive visual screening within the accessed areas of buildings on the Subject Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Subject Property.

- NWI Wetlands: The Subject Property has been reviewed for jurisdictional wetlands using the National Wetlands Inventory-Wetland Mapper to determine whether mapped federal wetlands have been indicated on the Subject Property. Any further evaluation or legal delineation of regulated wetlands areas is excluded from the scope of work. It is also emphasized that a field delineation of regulated wetlands by a qualified professional

would be warranted to more fully determine the presence or absence of regulated wetlands at the Subject Property.

- Lead in Drinking Water: Review of the potential for elevated levels of lead in the drinking water by determining the source of the drinking water supply and a review of available testing or compliance data reports.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:	460 Park Avenue				
City:	New York	County:	New York	State:	New York
Tax ID/Parcel Number:	Block 1293, Lot 35				
Approx. Land Area:	0.31				
Apprx. Latitude/Longitude:	North 40.7620270 degrees/West 73.9710100 degrees				
Additional Details (if appl.)	The Property secondary addresses include 65-77 East 57th Street				
Property Owner:	Hahn Kook Center USA INC				
Zoning Designation:	C5-3				

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	No	The date and/or type of the first developed use of the Subject Property was residential in 1892. Records gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals.
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.4 ESA Report Component Dates/Viability

The ASTM E1527-21 standard states that an environmental site assessment (ESA) is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the Subject Property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). Specifically, all of the following components must be conducted or updated within 180 days prior to the date of acquisition or prior to the date of the transaction. The following table summarizes the component completion dates:

ESA Component	Completion Date
Interviews:	November 25, 2024
Env. Lien Search:	(excluded from scope)
Government Records Review:	December 2, 2024
Visual Inspections:	November 25, 2024
Env. Professional Declaration:	December 3, 2024

2.5 User Reliance

This report is for the exclusive use of Hahn Kook Center (USA), Inc. and additional relying entities, if any, named on the front cover. No additional individuals or entities shall be permitted to rely upon any data, interpretation, reports or other information or documentation contained in this report, without first obtaining the consent of Hahn Kook Center (USA), Inc.; and without obtaining written consent from Hillmann in the form of a reliance agreement/letter.

Hillmann may, in its sole discretion, withhold its consent to additional reliance and/or Hillmann may condition consent for reliance upon payment of a fee or other conditions.

2.6 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no areas of the Subject Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Subject Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site-specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Subject Property and immediate surrounding area.

2.7 General Limitations and Exceptions

Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, would be further specified in Section 4.1.

Significant limitations related to the condition or accessibility of the Subject Property at the time of the site reconnaissance, if encountered, are reported in Section 6.1.

Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E 1527-21 are reported.

Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Subject Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Subject Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Subject Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents.

No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources, including information obtained during the assessment, whether written, graphic or verbal, provided by the Subject Property contact(s) or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or government agency source. Independent verification of the accuracy or completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-21 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

Recommended response actions offered in Section 1.3, if any, are provided as an option to the Client, and may have taken into account the Client's relation to the Subject Property and/or their intended purpose of this assessment. If included, it is not intended by Hillmann to represent the only course(s) of action, or inaction, to take. Furthermore, it is emphasized that additional response actions may become advisable depending on the outcome of the initial action(s) taken. Hillmann advises that Client and any additional authorized relying parties as specified on the report Cover and Section 2.5, or via letter of reliance extension, undertake consultation with legal counsel familiar with environmental and real estate law would be beneficial to the decision making process for the type and timing of a response action to identified RECs or Business Environmental Risks, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User(s) of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

The User(s) assumes responsibility for business decisions that it makes utilizing information in the report provided by Hillmann. Hillmann shall not be responsible for any conclusions, interpretations and/or decisions of the User(s).

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term “User” is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Subject Property; specifically, the entity or entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

No prior environmental reports/documentation were provided.

3.2 User Responsibilities

In order to qualify for Landowner Liability Protections (LLPs) offered by federal regulations, the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User should provide the following information to the environmental professional (Hillmann). Failure to conduct these inquiries could result in a determination that “all appropriate inquiries” is not complete. To assist the report User to meet these requirements, Hillmann has provided a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 with instructions to complete and return to Hillmann. 4.0 RECORDS REVIEW

4.1 Environmental Information

Physical Setting

Source	Discussion
USGS 7.5 minute Topo Map:	The Subject Property lies at an elevation of approximately 48 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the south-southeast. The closest down gradient water body is East River, located approximately 5,800-ft feet to the ESE.
USDA Soil Data: (EDR GeoCheck)	The soil type at the Subject Property is classified as "Urban Land". The Urban Land designation indicates that a majority of the original soils on the site have been disturbed by development or covered with impervious surfaces, such as buildings or pavement.
Geologic Data: (EDR GeoCheck)	The geologic formation in the vicinity of the Property is described as of Stratified Sequence, Paleozoic Era, Ordovician System and Middle Ordovician (Mohawkian) Series.
Prior Env. Reports: (Section 3.2)	None provided.
Additional Sources/ Data:	No additional physical setting sources or data was obtained.
Groundwater Flow Discussion:	Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the east-southeast.

Federal, State and Tribal Environmental Record Sources

Standard government records were obtained and reviewed primarily via a third-party regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT. The report provided government records from the standard environmental resources and within minimum search distances specified by Section 8.2.2-Table 2 of the ASTM E1527-21; and were reviewed for the purpose of identifying potential RECs in connection with the Subject Property. Additional detail of the source and significance of the regulatory databases can be found in the regulatory database report in Appendix E. Hillmann has also included discussion of records pertaining to the Subject Property from other government record sources not specifically listed under Table 2, as applicable.

Reported distances for adjoining property listings, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to non-petroleum product releases within 1,760 feet of the Subject Property in the up-gradient direction, 365 feet of the Subject Property in the cross gradient direction and 100 feet of the Subject Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Subject Property in the up-gradient direction, 165 feet of the Subject Property in the cross gradient direction and 100 feet of the Subject Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the Subject Property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Subject Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that are considered to constitute a vapor encroachment condition (VEC) to the Subject Property, if any, are identified and discussed in this section.

The EDR Radius Map report is attached in Appendix D.

Subject Property Listings

The following listings of the Subject Property were identified:

Name/Address:	460 Park Ave
Database(s):	TSCA, MANIFEST, AST, PRP, PRP, FINDS, AST
Data Discussion:	The TSCA listing is for a tenant ICC Chemcial Corporation import of Decanedioic Acid. The MANIFEST listing is for a tenant - Lenke Braun Estate handling of regulated substances. The AST listing is for a permit for an aboveground storage tank for #2 heating oil listed as having been installed in 1969 of 5,000-gallon capacity. 460 Park Avenue South is listed as being equipped with a 1969 installed 5,000-gallon, #2 heating oil aboveground

	storage tank. While the EDR Radius report plots the listing at the Property, it appears to be associated with Park Avenue SOUTH at the corner of East 31st Street. No vent-pipes or fill-ports were observed and based on observations and interviews no AST/USTs are present at the Property. The PRP listings are for State Bank of India and LSG 365 Bond Street LLC each with settlement dates listed. None of the listings are indicative of a release and are not considered a REC.

REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Subject Property.
VEC Discussion:	Based on the available data, a VEC is not suspected.

Surrounding Area Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Subject Property. In order to keep this discussion informative and concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Subject Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and concluded not to be RECs in connection with the Subject Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status.

Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Subject Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government environmental regulatory databases was also conducted, as well as a general cursory internet search of the Subject Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
NYCDEP, NYCFD, NYSDEC	FOI	No records indicative of a REC received or identified.
NYC DOB	Online search	No records indicative of a REC received or identified.

4.2 Historical Research

Historical records have been compiled and analyzed for historical property information and developing a history of previous uses of the Subject Property, adjoining properties and surrounding area. These records were reviewed for the purpose of identifying the likelihood of past uses having led to RECs in connection with the Subject Property.

The historical record sources listed below have been sought with the objective to document past uses of the Subject Property from the present back to the Subject Property's first developed use, or back to 1940, whichever is earlier. The term "developed use" includes agricultural use, placement of fill dirt and other uses that do not involve structures. Hillmann has sought to review historical records in minimum intervals of five years.

Fire Insurance Maps

A Certified Sanborn Map Report was obtained from EDR for a review of published historical fire insurance maps for the Subject Property and surrounding area. The following is a summary of site uses and notable details depicted by the available maps:

Year(s)	Subject Property	Adjoining Properties
1892, 1907, 1951	Multiple dwellings, mixed-use and bank.	Dwellings, hotel, apartments.
1976-2005	22-story plus basement building	Multiple commercial buildings.

A copy of the Certified Sanborn Map Report is attached in Appendix E.

City Directories

An EDR City Directory Abstract report was reviewed for data of prior occupants of the Subject Property's street address. The following is a generalized summary of the findings of city directory research for past occupants of the Subject Property.

Subject Property Use(s) / Occupant(s)	Years
Residential and commercial listings	1927-1950's
Multiple commercial tenants	1950's-2020

The EDR City Directory Abstract report was also reviewed for listings of prior occupants of the adjoining properties. The following is a generalized summary of the findings of city directory research for past occupants of the adjoining properties:

Adjoining Property Use(s) / Occupant(s)	Years
Multiple residential and commercial listings. None of environmental concern.	1920-2020

A copy of the EDR City Directory report is attached in Appendix E.

Historical Topographic Maps

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical topographic maps were not researched for this assessment.

Year(s)	Subject Property	Adjoining Properties
	No records available.	

If obtained, copies of historical aerial photographs have been included in Appendix E.

Historical Aerial Photographs

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

Year(s)	Subject Property	Adjoining Properties
	No records available.	

If obtained, copies of historical aerial photographs have been included in Appendix E.

EDR High-Risk Historical Records

The EDR Radius Map™ report, which is discussed in greater detail in Section 4.1 and attached in Appendix D, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Subject Property. These databases include EDR Hist Cleaner – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Hist Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a proprietary database of sites historically occupied by manufactured gas plants and related facilities.

EDR Database	On-site Listings	Adjoining/Off-site Listings
EDR Hist Cleaner: (on-site/adjoining only)	None	None within area of potential concern
EDR Hist Auto: (on-site/adjoining only)	None	None within area of potential concern
EDR MGP: (1-mile distance)	None	None

Petroleum/Natural Gas Well Review

The historical record sources were reviewed for records of petroleum and/or natural gas wells at the Subject Property. No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

Interviews/ Anecdotal:	No additional pertinent historical data was obtained.
Local Gov't Records:	None identified.
Prior Env. Reports:	None provided.
Site Observations:	Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance.
Other Sources:	No additional pertinent historical data was obtained.

Summary of Identified Historical Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Subject Property:

Date Range	Subject Property Use(s)
1892-1950's	Dwellings, Mixed-use, Bank
1950's-Present	Multi-story commercial office building

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Date Range	Adjoining Property Use(s)
1892 to present	Mix of residential, mixed-use commercial businesses

Historical Records Data Failure

The ASTM E1527-21 standard defines data failure as failure to achieve the historical research objective even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the Subject Property from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historical use/conditions were sought in intervals no less than approximately five years, unless the Subject Property conditions appear unchanged over a longer interval. In encountered, data failure and its significance as a data gap is discussed below:

Objective	Met?	Detail	Significant?
First developed use/ date determined?	No	The first developed use of the Property was for dwellings in the 1892.	No
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps.	No
All obvious prior uses identified?	Yes	See Summary of Identified Past Uses of this section.	N/A

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

Historical Uses REC Discussion

Per review of historic Sanborn Fire Insurance Maps, the Property was historically improved with multiple mixed-use (store-dwelling) row buildings and a bank. While the historic buildings may have been equipped with heating oil tanks, given the 1954 redevelopment of the site with the present 22-story plus basement building, any historic tanks or impacts would have been removed during redevelopment. The above is therefore not considered a REC and no further investigation is recommended.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as “Non-Scope Considerations”). The ASTM E1527-21 standard defines the term business environmental risk (BER) as, “a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.”

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Subject Property built prior to 1990 for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

Given the 1954 year of construction, asbestos is suspected unless ruled out by Laboratory analysis.

7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards, and no testing has been conducted.

Given the 1954 year of construction, lead-paint is suspected unless ruled out by Laboratory analysis and/or XRF field survey.

7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Subject Property is located in an area classified as Zone 3 or 'low risk'. area for radon.

Radon sampling will be performed and the corresponding report will be presented under separate cover.

7.4 Mold/Microbial Damage

The contracted scope of work included a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth.

No mold/moisture concerns were observed or identified.

7.5 NWI Mapped Wetlands

The National Wetlands Inventory online Wetland Mapper was reviewed for indications of jurisdictional wetlands at or immediately adjoining the Subject Property. The scope of work for this assessment excluded a visual determination of regulated wetlands at the Subject Property. It is emphasized that, regardless of the data reviewed via the NWI Wetlands Mapper, a field delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Subject Property.

A review of NWI Wetlands Mapper did not indicate regulated wetland areas on the Property.

7.6 Lead in Drinking Water

The scope of work for this assessment included a review of the potential for elevated levels of lead in drinking water by determining the source of the drinking water supply and a review of available compliance or testing data.

The Property is served by the NYC POTW.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 35 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 9 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there are 343 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 10 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

DEC Memo:	e2mis no 159003 J.Henrique reported a leak of 1 gallon of hydraluic fluid from Vehical#60565 into the sewer catch basin in front of 65 E.57 ST. J.Henrique#19120 and the cleanup crew placed absorbent pads and pigs from a Con Edison Spill kit around the sewer to prevent any further hydraluic fluid from entering the sewer. 7/05 11:25 E.Fermanit, Environmental Supervisor, notified the control center on 06/07/05 at 11:17hrs. to report that he now thinks that there could be a possible release into the sewer, so it is now being treated as a release into the sewer. The cleanup is pending at this time. 06/07/05 12:38. Update: A.Drummings, of EH&S, notified the control center on 06/07/05 at 12:35hrs. to report that Transportation is on location, and is waiting for a drip pan to be delivered to them so repairs on the hydraulic hose can

VAULT # V3078 (Continued) **S106968501**

be repaired. The drip pan is
on its way. Clean Ventures, has been notified and is enroute to the location to clean the catch
basin, the sewer and to complete the cleanup in V2420. A.Drummings, also at this time states that
there could have been a spill of some of the hydraulic fluid and water in to a telephone manhole.
The telephone manhole is located approx. 30' east of V2420, which was about 5 feet behind were
vactor truck #60565 is located. The manhole cover has not been pulled at this time, what spilled if
any is unknown at this time. Logger : M.Casalta#12684 06/07/05 13:24. A.Drummings, of EH&S,
notified the control center on 06/07/05 at 13:25 hrs. to report that he flagged down a Verizone
Crew that was working a block away, who verified that the telephone manhole was a Verizone manhole.
The crew went on to say that this type of manhole has a catch pan under the cover, so anything that
may have leaked into it would be caught in the pan and not enter the structure. The manhole cover
was not pulled, the Verizone crew stated that the next time there is work that needs to be done in
that location the crew would diaper up anything in the pan. A.Drummings also stated that the
cleanup is now going to be done by Allstate, not Clean Venture, due to the fact that Allstate will
be there quicker. Logger : M.Casalta#12684 Update: 6/24/05 @ 11:19 hrs. Cleanup on the street and
clean out of the catch basin completed by Allstate on 6/7/05. Allstate vactor truck used to
cleanout catch basin, adsorbent pads collected from street and vactor pump used to collect
oil/water from street. A. Drummings # 84163. Closed. 8-18-05. George Breen

DEC Memo:	1/31/07 - Raphael Ketani. I spoke to Augustin Desintonio, the Laundry/Valet Manager of the Four Seasons Hotel. He said that only 1 or 2 drops of perc leaked from the machine. He sent me a FAXed letter with a bill from Metropolitan Laundry who repaired the machine. The letter bill stated that the machine was safe to use. Mr. Desintonio said that the union was demanding a letter from DEC stating that it was safe to work in the laundry room again. I sent him a letter stating that the few drops of perc would not pose a health risk to people or the environment. Based upon the small size of the spill, I am closing the case.
Remarks:	ABOUT 1 OR 2 DROPS SPILLED OUT OF DRY CLEANER AND IS ALL CLEANED UP: MACHINE ALL REPAIRED

the jars were broken. 10/08/15-Hiralkumar Patel. 3:21 PM:- sent email to Mr. Michel and asked him to submit site map with sampling locations and to explain different results of the samples and improper transfer of the samples to the lab. 3:42 PM:- received email from Mr. Michel. he mentioned that new samples will be taken in next several days and documents will be submitted after receiving results of new samples. 10/09/15-Hiralkumar Patel. received email from Kosta Kamberis (at 4:01 PM on 10/08/15) from Environmental Services NYC. he mentioned that two of the small jars were broken during shipment. these four samples were collected from two locations in order to see the impact of the asphalt layer to soil sample compound concentrations. they plan to collect six additional samples. he also mentioned that the same sample appear to have difference results because the lab run analysis for the original sample and another analysis diluting the sample. 12/07/15-Hiralkumar Patel. 2:12 PM:- received email from Mr. Michel including sampling report. abstract: - six (6) soil samples were collected from 3 ft below slab - no VOCs noted in soil samples - SVOCs noted in all soil samples 2:50 PM:- spoke with Mr. Michel. he confirmed that soil observed underneath the tar membrane was a backfill material. after reviewing available information, case closed based on following: - case reported due to tightness test failure of 17,000 gal aboveground tank - tank was removed - no contamination noted in soil/dirt samples from area between the tank and tank room floor - noted SVOC compounds in soil samples from soil below the tank room floor which could be result of previous use of the area (as coal vault) and tar like membrane noted underneath the tank room floor 3:06 PM:- sent spill closure letter to Mr. Veffer. letter emailed to Mr. Veffer and Mr. Michel.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC Inspector notes: Mike Kessler, ERT-- 285 gallon capacity transformer. Historical data of 10 ppm. Sample taken to Astoria for confirmation. Transformer has been de-energized. Drain leads to sump in adjacent manhole. Will pull other manhole to check-- will check sewer trap for product. Crew was on site last week. Transformer read above min. Apparently released over weekend. Relayed info to Enzo Catanzaro, NYCDEP he has someone en-route. 8/17/99, Spill #, 101 East East 56th St. 265 gallon capacity transformer in vault released contents. Possible connection to sewer or to adjacent bldg. house trap. On scene: Nancy Barsoum, DEP Mike Kessler, Con ed entered bldg. to check house trap with in tenance personnel. DEP IWCS called to check sewers. Confusion

VAULT 2831 (Continued) **S104507900**

arose regarding <50 vs. >50
tankers. Con ed had under 50 tanker on site to vac out vault. DEP said until confirmatory samples
read, must use over 50 tanker. My understanding is that part 364 <50 tankers are not permitted to
take >50 ppm. Kessler checked with Con ed permitting group. was told all tankers (>50, <50) are 364
part permitted to take all waste. They are identified <50 and >50 for con ed's purposes of waste
stream mgmt. 1 told Kessler to use over 50 tanker today and 1 would confirm permitting issue with
Albany and also let Enzo C.(DEP) know. Con ed e2mis notes: Found approx 100 gallons of transformer
oil on the floor in vault, the vault has a drain with sewer connection. There is no visable
movement of the oil at this time. There is no water, no visable cracks, no smoke or fire. No sump
pump, a sample was taken. Installed spill tag, have a tanker enroute. Nany Badsoum on location 1005
hrs. Requested the under 50 tanker be replaced with over 50 tanker. 49 gallons of oil and water
removed from floor. The capacity of transformer is 286 gallons. Floor was cleaned and debris
removed using 1 solid wasted drum (55 gallon). Jane O'Connell from the DEC on location at 1330
hours, questioning if the oil entered the water way. She was told due to the clogged drain we do
not suspect any oil release into the sewer. Lab Analysis #99-08590, pcb 9ppm, AROCLOR 1260, drained
273 gallons of dielectric fluid from transformer in vault 2831 into corporate transportation tanker
and sent to Astoria yard. Partial clean up is completed. Pending replacement of transformer. Final
cleanup completed using <50ppm vactor truck. Generated and removed one 55 gallon <50ppm solid waste
drum. Waste was transported to 700 E. 16 St. Cleanup was started on 9-4-99 at 10:30 hrs and
completed on 9-4-99 at 13:50 hrs. I&A cleanup crew was R.Bracco, G. Johnson, F. Castor, and
T.Conway. Requested from Lou First to clarify suspected release into water way. Jane O'Connell from
the DEC, inspected Customers traps from the basement of 101 E 56th st. and found no oil in traps.
Drain from vault enters Customers sewer line. It was contained in vault and did not enter water
way, as per Robert Biliski Operating Supervisor.

Remarks: about 100 gals still in vault with some getting into the sewer system - cleanup crew is on the way

DEC Memo: e2mis no. 129501: Formel 47752 splicer of I&A while on routine inspection of switch in V7019, F/O
125-137 E 57 St, found a spill of approx. 5 gallons of transformer oil on floor of vault which had
leaked from the bottom of the unit. Said spill was contained from migration to common sump (Group
of 4 transformers) by placing pigs/pads, and the sump was plugged. No entry to sewer or waterway,
no cracks, no water in vaults, a PCB sample was taken and tag #17793 was placed. Cleanup pending
lab results. (The spill actually originated from the bushing and not the bottom.) Lab analysis
SA00-00139 received on 1/5/00 at 18:05 hrs = 2 PPM PCB. At 1530 hrs. on 01/05/00 J. Arcoleo (ERT),
J. McNeil (I&A), and D. Comenale (DEC) met at V7019. D. Comenale reviewed the spill condition in
V7019 and found that spill condition was described accurately in the spill report sent to DEC. ON
01/07/00 SHIFT #1 UNDER THE SUPERVISION OF J.LIGUORI #14084, D.PACE #13149 AND J.MORGAN #14490
DOUBLE WASHED AND CLEANED THE FLOOR AND SIDE OF THE TRANSFORMER IN VAULT 7019. THE DEBRIS WAS
REMOVED BY A FLUSH.TRUCK. YELLOW SIGN #17793 WAS REMOVED. AFTER THE CLEAN UP WAS COMPLETED THE
TRANSFORMER WAS REINSPECTED AND IT WAS DECIDED THAT THE UNIT COULD BE SAVED. MR. PACE THEN REMOVED
100 GALLONS OF TRANSFORMER OIL. THIS WAS DONE TO BRING THE LEVEL OF OIL IN THE TRANSFORMER BELOW
THE SECONDARY BUSHINGS, SO A REPAIR COULD BE MADE. ON SHIFT #2 THE BUSHINGS WERE REPAIRED. MR.
GILSON #17650 AND MR. MONTES#15927 REFILLED THE TRANSFORMER AND RECONNECTER THE SECONDARY CABLES.
CLEAN-UP AND REPAIRS WERE COMPLETE AS OF 01/01/2000 22:00 HOURS.

DEC Memo:	4/9/18-Ted Masters from Envirotrac sent the following email-Dear Ms. Zhune:As per our conversation, the truck elevator at the above location had malfunctioned with a loss of hydraulic pressure. The truck elevator is constructed of two large hydraulically operated pistons positioned vertically within the lowest floor of the building s sub-basement. The pistons ride within two boreholes drilled approximately 20 feet deep beneath the basement floor. The elevator was immediately taken out of service at the time of the malfunction for inspection and to schedule repairs. It was estimated that 200 gallons of hydraulic fluid was lost. Based on my observations today, there is no visible hydraulic fluid above ground; all lost fluid is contained below ground and suspected to have accumulated within the annulus of one or more of the piston boreholes. The plan is to recover any lost hydraulic fluid during replacement of the pistons, tentatively scheduled within the next month or two. You will be notified of the schedule for replacement. Attached is a photo of the truck elevator pistons 04/19/18-Hiralkumar Patel. received email from Ted (at 2:30 PM on 04/16/18) from EnviroTrac including RAWP. summary: - site has 43-story building with 4-story basement - basement levels 2 and 3 are used for tenant parking - supplies are received and trash is removed at the loading docks located four stories below street level ---------- - two truck elevators (Truck Lift #1 and Truck Lift #2) service the basement levels with access at street level located at 56th Street - Truck Lift #2 is constructed with two (2) 24-inch diameter hydraulic cylinders consisting of telescoping pistons that drive the 60,000-pound capacity

CONTAINMENT AREA (Continued) **S121984828**

elevator - telescopic
cylinders were installed in 2003 to replace a conventional single piston jack system that was
installed during building construction in the 1970s - cylinders are positioned vertically within an
elevator pit at the lowest floor of the building's sub-basement (77 ft below street level) and are
set within two boreholes that were drilled to approx. 60 ft deep (137 ft below street level) -
telescopic piston system extends to a depth of only 20 ft within these boreholes - sump is located
within the elevator pit floor to remove accumulated water - Truck Lift #2 had malfunctioned on
01/01/18 with a loss of hydraulic oil - no evidence of release was observed above floor level at
the time of initial observation on 01/01/18, nor after subsequent pressure test on 01/03/18 - no
oil was observed in sump pit - hydraulic cylinders from Truck Lift #2 will be replaced -
accumulated oil will be recovered from the boreholes RAWP does not include copy of letter report
(prepared by elevator company) dated 01/18/18. 9:40 AM:- spoke with Brian. he mentioned that the
two truck lifts are approx. 50 ft apart and not connected. the two lifts were installed in 1970s
when the building was built. at that time, the lifts were installed with 60 ft deep piston
boreholes (two boreholes per lift) drilled within bedrock. in 2003, Truck Lift #2 was removed just
to install a newer system and not because of any leaks. during lift replacement, 40 ft section of
two piston boreholes for Lift #2 were backfilled as the newer lift system required only 20 ft deep
boreholes. the newer system (Lift @2) malfunctioned in Jan. 2018. the elevator contractor added 200
gal of hydraulic oil to investigate lift failure and these entire amount was lost from the system.
Brian doesn't know total capacity of oil reservoir for the lift. based on available information,
total amount of spill could be more than 200 gal. asked Brian to submit 1) copy of letter report
dated 01/18/18, 2) site map with location of both lifts, 3) installation details/drawings (as-built
plans) for both lift systems, and 4) addendum to RAWP including details about removal of previously
backfilled material from boreholes. prior to these submissions, Brian requested a site inspection
which is scheduled at 1 PM on 04/24/18. Theodore Masters EnviroTrac Ltd. PH. (631) 924-3001 (O)

visited site and met Ted, Brian and Joseph Greisch. inspected lift area. two truck lifts are
located together (not 50 ft apart as Brian mentioned earlier). Brian confirmed that both systems

are not connected in any manner. hydraulic oil for both lifts is stored in two separate square ASTs located in the adjacent room. the older system from 1970s has 3,000 gal tank and the newer system from 2003 is connected to a 700 gal tank. Brian mentioned that estimated loss of 200 gal is based on inventory records. piston for the newer system is wider then system installed in 1970s. nobody in building management/maintenance team knows about what material, if any, used to backfill lower 40 ft section of boreholes prior to installing newer lift system in 2003. suggested Mr. Greisch to contact NYC DOB to obtain as-built plans for the new lift system. 590 Madison Avenue, LLC. **property owner** c/o Edward J. asked him to submit update on spill investigation/remediation. email copied to Mr. Greisch, Brian
and Peter Baty (pbaty@partnersenv.com). 10/01/18-Hiralkumar Patel. 9:07 AM:- received email from
Peter including a letter. he mentioned that implementation of the remedial response action will be
initiated in middle of Nov. contractor will conduct an initial assessment and recovery of (any) oil
from within the elevator cylinder borehole. after initial assessment and recovery effort, the
elevator repair contractor will re-drill the elevator cylinder borehole. Partners will observe and
monitor the drill cuttings for any residual hydraulic oil. Partners will submit work schedule, once

he mentioned that the elevator piston that leaked has been removed. Dave will inspect the shaft for
the presence of groundwater and hydraulic oil at about 6:30 AM Thursday (10/25) morning. they will
set up frack tanks and/or an oil/water separator there next week with drilling for the new elevator
piston pit set to begin the week after. 10/25/18-Hiralkumar Patel. 3:06 PM:- received email from
Dave. he inspected site this morning and noted minor sheen on water coming from the shaft. an
oil/water separator will be installed on 10/29/18. 10/30/18-Hiralkumar Patel. 12:43 PM:- received
message from Ted. he mentioned that new piston borehole drilling will start on 11/01/18. 2:59 PM:-
received email from Ted confirming installation of oil/water separator. 11/14/18-Hiralkumar Patel.
8:49 AM:- received call from Ted. he mentioned that borehole for the previous piston was not filled
and contractor has cleaned out sediment from it. they pumped out oil/water mixture from the
borehole and have recovered approx. 300 gal of oil. Ted confirmed that water comes in borehole. a
new piston will be delivered to the site after 11/25/18. 1:45 PM:- visited site and met Ted and Mr.
Greisch. found two piston boreholes full of water. no petroleum sheen or product noted on water. no
petroleum odors noted in the area. two boreholes are at least 80 ft bg and about 60 ft deep and
were drilled in bedrock. based on available information, asked Mr. Greisch to monitor boreholes for
any product until they are ready to install new pistons. if no product noted on water, then no
further investigation/remediation is needed and case can be closed. 11/28/18-Hiralkumar Patel. 1:28
PM:- received email from Mr. Greisch confirming no product observed in piston boreholes.

DEC Memo: 12/16/2015 - Feng- Duty Desk. Talked to Steve Grens (914-922-2371). They have knocked the old building already and doing excavation for the new building. The site foot print is 5,020 square feet. The bedrock is at 27 feet. They plan to excavate everything down to bedrock and then blast the bedrock to 47 feet, for cellar/basement. They did the waste classification 6/2015 and found soil contamination beneath the slab. A 1,080-gallon fuel oil tank was found in the southeast side of the site. The tank was subsequently removed in 8/2015 and no contamination. Another 1,000-gallon tank was found in the south portion of the site and was removed 10/2015. When they did the trench and shoring at the site, they then related the soil contamination to the 1,000-gallon tank. According to the plan, they will replace the flags of the sidewalk. They are at 15 feet below the former slab now. All the soil shall be out by next month 1/2016. The vapor mitigation effort is not proposed. The letter also requires development plans. 1/13/16- DEC Piper spoke with Steve at AKRF, he asked for 1 month extension. Granted. Site will be dug down 10' into bedrock. 6/20/16- DEC piper received email form Steve at AKRF. They anticipate completing soil removal within the entire footprint of the site and spill closure reporting within two months. Following soil removal, they plan on taking top of bedrock elevations across the site. They'll include the survey elevations on a figure in the closure report to close out the spill. 2/23/17- DEC Piper sent email to Steve Grens at AKRS requesting update. 11/14/19- DEC Piper - Spill project transferred to MD Hoque as per Vadim Brevdo. 12/16/2019-M.Hoque: An email sent to Steve Grens of AKRF requesting a project update. extension. Mon 12/30/2019 1:31 PM From: Stephen Grens To: Hoque, MD S (DEC) Cc: Michelle Lapin ; benjaminxue@xuelaw.com; liyf1@yuzhou-group.com Good Afternoon MD, It was nice speaking with you today. I just want to recap our call regarding the spill closure activities at 118 East 59th Street in Manhattan (NYSDEC Spill #1509445). The site development and spill closure activities were put on hold in 2018 due to a change with the developers LLC membership and management team. The NYCDOB also required them to submit a new set of foundation plans because their original plans from December 2014 pre-dated a change in building codes. SLCE was retained to revise and submit the architectural plans to obtain the permits required to close out the spill. With that said, we are requesting a six month extension (Summer 2020) to close out the spill. I appreciate your time and consideration regarding this matter. Best Regards, Steve Grens Senior Environmental Professional Site Assessment and Remediation .....

Hoque: The email below received from the RP's consultant AKRF regarding request for another six-month extension for closure of the spill case. Tue 9/1/2020 1:21 PM From: Stephen Grens To: Hoque, MD S (DEC) CC: Michelle Lapin ; benjaminxue@xuelaw.com; liyf1@yuzhou-group.com Good Afternoon MD, In December 2019, AKRF requested an extension for the spill closure deadline to summer 2020 and NYSDEC granted the extension via email. Since December 2019, the developer has been actively trying to secure a foundation contractor; however they were not able to due to outstanding NYCDOB violations that cannot be removed without bringing a general contractor on-board to remove the expired permits. The developer also tried to get a special permit to finish the spill closure work, but according to their DOB expediter, the DOB will not issue any permits until the foundation work is completed. Due to the circumstances, 118 East 59th Street Realty is not in a position at this time to move forward with the full foundation work, especially in light of the pandemic, market uncertainty, and potential redesign of the building. On behalf of the developer, we are asking the NYSDEC for another extension to close out the spill. We appreciate your time regarding this matter. Best Regards, Steve 9/3/2020-M.Hoque. Based on queries with the consultant(AKRF), request for another

six-month extension is approved to settle down all the formalities with the NYCDOB and close out the spill case. AKRF will update DEC in any deviations.(MDH) 6/30/2021-M. Hoque: An email sent to Steve of AKRF reminded that request for six-month extension to complete the site remediation has expired in March 2021. Asked to submit a site status report for review. (MDH) 7/7/2021-M. Hoque: The email below received from AKRF on 7/6/2021: Good evening MD, Unfortunately, no additional work has happened at the Site since the NYSDEC issued the last extension. After speaking with my client's counsel, they've been having difficulty engaging a new soil remediation contractor due to the labor shortage and surge in demand for skilled construction companies as the pandemic lifts. Is it possible to get another 6-month extension to complete the work? We appreciate your consideration regarding this matter. Please call me on my cell at (203) 810-6513 or email me with any questions or concerns. Thank you, Steve Stephen Grens Senior Environmental Professional P: 914.922.2371 - sgrens@akrf.com - www.akrf.com 34 South Broadway, Suite 300, White Plains, NY 10601 7/7/2021-M. Hoque: DEC approved 4-month extension instead of 6-month and informed that no additional extensions will be granted following this additional 4-month extension, and if RP does not proceed with remediation upon expiration of another 4- month extension, DEC will handover the case to DEC s Office of General Counsel for legal enforcement. (MDH) 12/15/2021: M. Hoque: DEC notified AKRF that the 4-month extension to complete site remediation and close out the above spill case at 118 East 59th Street expired last month. I am writing to you to respectfully request another extension of time to close out the spill. As you are aware, the site is a vacant development lot. There are no oil tank underground or above-ground at the site. All sources of release had been removed years ago. My client s management is located in Hong Kong and they do not have any employees in the U.S. Due to the extremely strict travel restrictions arising from the ongoing pandemic, their plan to assign an employee to New York did not work out. Hong Kong currently requires any person returning to Hong Kong to undergo 21 days of hotel/medical facility quarantine in isolation. US also tightened the visa and travel restriction on international visitors due to the pandemic. My office has made diligent efforts

reaching out to numerous general
contractors and site remediation contractors to explore potential engagements. Unfortunately,
despite our best efforts, we are not able engage a general contractor/site remediation contractor
to undertake the work yet, although we are still trying and hope to be able to engage someone asap.
Even though some general contractor/site remediation contractors have expressed interest, they
generally declined to take on this project due to the time constraints and their outstanding
engagements. Apparently, it is extremely difficult to engage competent contractors due to the
severe labor shortage and supply-chain constraints in the building industry. Furthermore, a general
contractor will be necessary to remove the site violations and renew the expired permits, including
the foundation permit, before site remediation work can start. New York City has extended the
FAIRER (Fine and Interest Reduction Enabling Recovery) Program and give the owners to cure
violation by March 20, 2022. We also hope to take advantage of the program and resolved all
violations asap. Due to these uniquely difficult circumstances, we respectfully request your kind
consideration to grant one more six-month extension to close out the spill. Your consideration is
highly appreciated. Ben Benjamin B. Xue, Esq. Attorney at Law Xue & Associates, P.C. 1 School

Good Morning, Mr. Xue: The Department reviewed and evaluated your request for the additional six
(6) months extension to complete remediation of the site and accomplish closure of an open spill
case. Based on the circumstances described in your Tuesday, December 21, 2021 4:12 PM e-mail, we
understand your client s challenges and the reasons for requesting additional 6-months extension.
The Department hereby approves the second four (4) months extension in lieu of the requested six
(6) months extension, so that your client can demonstrate the substantial progress towards
completion of the site remediation and closure of an open spill case associated with the site.
Please note that the Department expects to see a substantive progress on the project at the end of
the four (4) months period, that is on April 22, 2022. Please ensure that your client accomplishes
a substantive progress in the site remediation by April 22, 2022. The Department is interested to
move expediently on the project towards completion of the remedy and closing this spill case. This
is in the mutual interests of the Department, your client and the environment. Please also note and

update you as to the progress we made in connection with the spill closure. After months of
diligent efforts, we have finally been able to assemble a team to work on the spill closure at the
site. As you know AKRF is the environment consultant for us. Eastern Environmental Solutions Inc. (
Contractor), having an address at 258 Line Road, Manorville, NY 11949, will be our contractor to
perform the spill closure. We also reengaged Mueser Rutledge Consulting Engineers PLLC (MRCE),
having an address at 14 Penn Plaza, New York, NY, as our geotechnical and foundation engineer. We
also engaged Jam Consultants Inc., having an address at 104 West 29th Street, 9th Floor, to handle
the permitting process. MRCE has been monitoring the site and the neighboring properties and have
concluded that the site is safe to commence work. Contractor, AKRF and MRCE have jointly conducted
a site visit to discuss how to approach this project. Jam Consultants Inc. has studied the
previously approved SOE plans and developed a plan how to deal with the permitting process. Jam
Consultants have advised us that due to the expiration of all the previously issued permits and the
nature of the planned remediation work that they are going to withdraw the new building plan,
paving plan, fire alarm plan, and sprinkler and temporary standpipe plan, they will also refile a
modified SOE plan, obtain an SOE permit, fence permit and the permits for mechanical and structural
work. Jam Consultants Inc. has informed me that the permitting process will take around 1 month.
MRCE will update the SOE plan to address any additional work that will need to be performed in
connection with the spill closure. Contractor has stated that once the permits are issued, they can
mobilize in a week or two. The work should take no more than 2 months. My client is very sorry that
we are not able to complete the spill closure during the time period

you were kind enough to grant
us. Unfortunately, as you may appreciate, it is extremely difficult to assemble a qualified team
nowadays due to the severe labor shortage and the exploding construction boom we are currently
experiencing in an ongoing pandemic. We respectfully request your kind consideration to grant us
another extension so we can continue to move forward with our team to finally finish the spill
closure. Your time and consideration are highly appreciated. Ben

East 59th Street, Manhattan (Spill No. 1509445) This site currently is a vacant lot. In June 2015,
during foundation work for construction of a new building, an unregistered 1,080-gallon UST was
discovered. The tank was excavated and removed. In October 2015, another unregistered 1,000-gallon
gasoline UST was found on the site and excavated/removed. During removal, petroleum-impacted water
was observed leaking from holes in one end of the tank. Contaminated soil with petroleum odors,
discoloration and elevated PID readings was present beneath the tank, and a spill was reported.
About 216 tons of impacted soil were excavated and disposed of off-site. However, about 3,000 cubic
yards of petroleum-contaminated soil remain in-place on the northern part of the site. Waste
characterization samples of the soil were collected in October 2015, but results were not submitted
to DEC. In January 2016, DEC approved a one-month extension of plans to excavate the entire

building footprint 10 feet into bedrock. From December 2019 through April 2022, the Responsible
Party requested several more extensions due to changes to the site s development plan and soil
excavation plan, plus the need to obtain NYCDOB permits and COVID-19 pandemic issues. DEC approved
these requests. In April 2022, the RP s attorney notified DEC that the RP has retained AKRF as
environment consultant. On October 5, 2022, DEC received a remedial investigation work plan dated
2016 (revised in 2018). Upon review, DEC found the plan incomplete and insufficient for site
conditions. On October 12, 2022, DEC disapproved the work plan with comments pointing out its
deficiencies. DEC required that the plan be revised and resubmitted. (MDH) 12/7/2022-M. Hoque:

2/3/2023-M. Hoque On February 3, 2023, AKRF informed DEC that the remediation sub-contractor has
not been provided a work schedule for implementation of the RIWP. AKRF is pursuing to get a work
schedule from the sub-contractor. Upon receiving of a work schedule, AKRF will resubmit a revied
RIWP to DEC for further review and approval. (MDH) 3/8/2023-M. Hoque: On January 24, 2023, DEC
received a revised RIWP without a work schedule. DEC directed AKRF to submit another revised work
plan with a schedule. On March 3, 2023, AKRF submitted a revised RIWP with a schedule for
implementation of the RIWP. The RIWP implementation will commence at the end of April 2023. AKRF
will update DEC, with the site investigation activities. DEC approved the RIWP. (MDH) 8/22/2023-M.
Hoque: Due to difficulties to get into the site for work with three adjacent buildings surrounding
the site, The RP/consultant requested for 60-day extension to start the approved RIWP. DEC approved
the 60-day extension which will be expired on 10/22/2023. (MDH) 10/20/2023-M. Hoque: The consultant
AKRF informed DEC that their client picked a remediation contractor (Alba) to complete the spill
closure work at the site. AKRF should have Alba’s work schedule for the RIWP and AKRF will submit
that to DEC the next week. The RP expects to have the permits in November and then will mobilize to
start the work. (MDH) 11/13/2023-M. Hoque: DEC received a revised RIWP with schedule on 11/10/2023.
DEC reviewed the revised RIWP and found that the consultant addressed the DEC’s comments. The
revised RIWP proposed the followings: ? Soil waste characterization sampling. ? Excavation of four
test pits on and adjacent to the site access ramp, and collection of soil samples from the upper or
lower depth horizons of each test pit location for laboratory analysis

of VOCs and SVOCs. ?
Excavation of the entire footprint of the site extended to bedrock and, if bedrock is not reached
at all areas of the site and end point samples will be collected for analysis of VOCs and SVOCs. ?
Screening of soil samples using PID, which measures relative concentrations of VOCs in the soil. ?
Development and Implementation of Community Air Monitoring Camp (CAMP) during site investigation
activities. ? Development and Implementation of Health and Safety Plan (HASP), and ? Submission of
a remedial investigation report (RIR)/Spill Closure Report with descriptions of Sensitive

Xue ; Hoque, MD S (DEC) Cc: Stephen Grens ; Michelle Lapin ; jian.shi ; kevin.wang ; Brevdo, Vadim (DEC) Subject: RE: 118 East 59th Street (NYSDEC Spill No. 1509445) RIWP Submission Ben: While DEC understands that there are many factors and municipal agencies at play here, the delay since the Stipulation for this spill was executed on December 5, 2022, is not acceptable to DEC. In order to avoid enforcement of the Stipulation and the imposition of a civil penalty, please submit a work schedule to MD within 30 days of today s date (so no later than March 15, 2024). Please let me know if you have any questions. Best, Jack Agosta Jonathan Agosta, Esq. He/Him/His Senior Attorney, Office of General Counsel -MDH 3/20/2024-M. Hoque: The sub-contractor, ALBA informed DEC that they have received the DOT permits and will plan to commence to work as per schedule on Monday, 3/25/2024. (MDH) 5/17/2024-M. Hoque: On May 15, 2024, ALBA notified DEC that RI field activities including cleaning and housekeeping, removal of standing water, and excavation of four test pits on and adjacent to the site access ramp have been completed. ALBA is scheduled to collect post-excavation soil samples from the upper or lower horizons of each test pit at the end of May. AKRF will prepare and submit a remedial investigation report with a recommendation for further remedial action, if warranted. (MDH)

Remarks: New Construction came across contaminated soil that lead back to a source close to the new site. Tanks located and removed and confirmed as the source. Cleanup is underway.

DEC Memo:	11/01/2005 - Changed DEC lead from Sigona to Zalewski. (Zalewski) 3/20/2006 - No file shipped to Albany. Searched the spills data system. Appears to be related to Spill Nos. 9605869 and 9605857, which were closed. Searched the PBS data system. PBS No. 2-204412 has an expired registration. Shows a 6,000 gallon vaulted fuel oil UST closed-removed in June 1999 and a 5,000 gallon fuel oil AST installed in June 1999. (Zalewski) 3/20/2006 - Placed a phone call to 130 East 57th St. (formerly the Habitat Hotel). It is now operated as Hotel 57. Spoke with Joshua Samuel (Director of Operations). He is not familiar with the 1996 spill report. In 1997-1998, new management was brought in and no one from 1996 still works there. He has been there the longest and has been there since 1999. I asked about their oil storage and he said that they heat with steam and have not heated with oil since he has been there. He said a tank is still there. (Zalewski) 3/20/2006 - Placed a phone call to the property management company [Zeal Feldman (57th St. Operating, LLC)]. Left a voice mail message requesting a call back. (Zalewski) 4/3/2006 - Site being transferred back to Region 2. Facility has an expired PBS registration for a tank that is still present and no longer in service. It is unknown at this time if the tank is properly closed in place. Recommended next steps include searching files for Spill No. 9605869 and 9605857 to see if cleanup/PBS documentation previously submitted, sending a letter to the property owner/management company requesting additional information, or scheduling a PBS/spill site inspection. (Zalewski) 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Rahman) for review and closure - end 05/03/07 Inspected the spill location on 05/02/07 morning.That tank was removed and a new tank was installed in 1999.This tank is not in use now, as the building is gas heated now.The tank is sitting in a vault and fill/vent line in place(unplugged).PBS expired in 2004.No drain on the old tank floor,but there are small cracks on the floor.Letter was sent to(asking report on clean up) Hotel 57 130 East 57th Street

130 EAST 57TH ST (Continued) **S102400994**

New York, NY 10022 Attn: Mark J. Nasom 05/04/07 I received a call from Frank Kaiman(212-610-2855), in house counsel for 130 E 57th Street.He wanted to know what needs to be done.I faxed him the letter I already sent for the hotel.(SR) 06/06/07 Rec'd clean up report from Greenberg Traurig, LLP- Attorneys at Law for Hotel 57.Hotel 57 is the net lessee of the property with the property being owned by the Estate of Sol Goldman and various trysts relating to Sol Goldman.Invoice and waste disposal manifest for clean up was provided.As per the report,based upon research conducted by LandAmerica, the spill apparently was caused by a break in a nearby water main.Water entered the tank via a breach in the vent line for an aboveground storage tank(AST)located in the basement of the building.Phoenix removed oily water and oil soaked debris from the tank area for disposal.Tank was removed and replaced with a new AST in 1999 that is now inactive.Land America noted minor staining beneath the current AST but concluded that there was no residual evidence of the 1996 spill, and the concrete floor of the tank area was intact, with no cracks or other damage that would have allowed oil from the spill to seep into soil or groundwater.Documents in edocs.As per the spill clean up documents, the spill case can be closed.

Remarks: ROTTED VENT PIPE ON TANK - WATER ENTERED THE TANK AND DISPLACED THE OIL - SPILLED INTO BASEMENT AND SEWER - BASEMENT CONCRETE FLOOR - CALL CLEAN UP COMPANY PHOENIX ENVIORMENTAL (516) 864-4200

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT Called ConEd CIG they didn't have much info and eventually they gave me the Manhattan Ops # 212-338-3352. General Info: 50 Gals. of water; manhole# 50361 How spill was discovered: service connection needed repair. Containment: In manhole and no sewer connection Oil containing equipment in manhole: None Cleanup Plan: Sample already taken and cleanup expected 10/3/98 12:00pm -sps E2MIS 120261 J.McCabe 00305 If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50

S E CORNER 59TH STREET (Continued) **S103484972**

PPM and all liquid and waste
will be manifested accordingly. The structure will be double washed
with a degreaser, i.e. Slix.
All cleaning material and PPE will also be treated as >50. If any
sludge is found within a manhole
it is treated as lead contaminated and manifested accordingly. The
spill identification tag will
remain secured to the structure until the analysis is completed and if
<500 PPM the signage will be
removed. If the analysis is >499 PPM, a grid will be prepared for wipe
testing the area. Until the
analysis of the wipes are proven to be <10ugs/100cme2 all additional
waste produced from the
structure will be treated as the original analysis. If this spill
occurred in a transformer vault
containing a sump pump and there was a possible release, the drainpipe
trap will be dismantled to
determine if oil was released. Sludge found in a vault, through
historical analysis, has been
determined not to contain lead. 10/03/98 02:10 HRS KEVIN DOWLING 44104
