DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #136792: 5/02/01 12:50 hrs. R. Calderon #19847, Underground North Splicer, reported at 12:26 hrs. that he found at 12:10 hrs. approx. 1 gallon unknown oil on top of approx. 1000 gallons of water in manhole M11322 in front of 131 East 58 Street between Lexington and Park Avenues. He was on location to make repairs (tie in secondary mains) when he discovered the spill.Samples were taken by Rich Calderon #19847 for PCB and Oil Id on a priority E basis. Chain of Custody #AA23217 issued. This is an un-diaperable spill (he tried to diaper the oil up but was unable to do this). UPDATE: 5/3/01 Al Munro #13615, Underground North Supervisor, reported at 09:40 hrs. that there is a problem in this manhole. The underground is performing the cleanup and oil is coming up through the floor of the manhole. This situation has to be investigated and resolved before the cleanup can be completed. UPDATE @ 12:20 hrs. Anthony Smergaliuolo, UG Supervisor, reported that E,H & S Mgr. Lou First just left site. They discovered a crack in the floor when oil & water was trapped during the cleaning process. This trapped liguid migrated out of the crack and back onto the floor. This action was mis-interpretated as oil coming up through the floor from outside the structure. He reported that the cleanup was completed at 12:15 hrs.. The manhole was double and tripled washed and scrubbed with Slix. Removed 300 gallons of oil & water from manhole. Removed 4 barrels of solid waste. Cleanup crew: Leo Morales #74700, O. Cruz #14192, and J. Kagenaar. Cleanup supervisor was Al Munro who was relieved by Anthony Smeragliuolo at 11:00 hrs. on 5/03/01.

MANHOLE 11322 (Continued) **S105057087**

Spill tag #18771 removed.
UPDATE: @ 16:00 hrs. Lou First reported that he spoke to Jane O'Connell of the NYSDEC at approx. 12
noon concerning the hole in the floor of the manhole. He explained that the lab analysis results
were less than 1.0 ppm . She agreed that no further testing would be necessary since the hole in
the floor was not an earthen sump type situation. She also indicated that since there was no
evidence of PCBs from the test results that no further testing would be required. Lou First
instructed UG Supervisor Anthony Smeragliuolo to make repairs to the floor after the cleanup was
completed.

Remarks: CLEAN UP PENDING. NO SEWER/WATER. SPILL WAS INITIALLY CALSSIFIED AS A 24HR DIMINIMIS SPILL. DURING CLEAN UP OIL WAS DISCOVERED SEEPING THROUGH FLOOR OF MANHOLE. SITUATION TO BE INVESTIGATED, CLEAN UP WILL NOT BE COMPLETED WITH IN 24 HOURS. CON ED# 136792. SAMPLE FOR PCB AND ID.

DEC Memo:	162242. 12-14-05. @ 20:45 FOD M. Milano 68073, discovered 5 gallons of unknown oil on top of 25 gallons of water. In V8115, located at 1 E 58 St. & Madison Av. The source/cause of spill is unknown. Crew was on location, locating a trouble feeder 9M25. Acct. f3243 No smoke/fire involved. No sewer/waterway affected. No injuries related to the spill. Weather conditions did not contribute to the spill. No private property affected. Standing water; yes. No concrete sump. Environmental tag# 44090 Chain of custody #EE 08620. Logger: T. Haynes 82326 12-14-05. Incident has been change from a regular spill to a 72 hour spill. T. Haynes 82326 12-15-05 04:00AM. Lab Sequence Number: 05-13257-001 MATRIX: OIL GRAB DESCRIPTION: WATER/OIL FROM VAULT TOTAL PCB 344 ppm Clean-up is set up for 07:00AM on 12-15-05. T. Haynes Update: 12/15/05. Steve Asfour, I&A Operating Supervisor, reported at 09:26 hrs. that he was at this location with the I&A crew and discovered that some oil migrated from vault V8115 through a weep hole into adjacent vault V6050. There was 3 to 4 inches of oil spread on the floor from the weep hole. There was also an oil stain 6 inches on either side of one corner of the vault. There was no oil or water in the sump pit. The pump was not running and it was disconnected. The crew inspected the trap and found no oil. Mr. Asfour stated that the transformer in vault V8115 is being condemned and is below minimum oil level. He believes there is a bottom leak in the transformer. According to Mr. Asfour & Joe Campanile, I&A North Planner the cleanup will be performed by a contractor. Note: Vault V6050 will be included in this spill incident and will be cleaned by the contractor when they clean V8115. R. Pellegrino #38620. Update: 12/15/05 @ 14:09 hrs. Cleanup contractor is Allstate PowerVac. Update: 12/15/05 @ 14:25 hrs. As per discussion with I&A Planner, Joe Campanile at 14:20 hrs. the final cleanup of these two vaults will not be completed in 72 hours. This incident is being re-classified for Spill - DeMinimis (72 hr. Underground) to Spill - Dielectric Fluid since the cleanup will not be completed in 72 hours. The defective transformer must be removed before the final cleanup can be completed. R. Pellegrino #38620 Closed 2-24-06. see eDocs. GB

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND/VOUGHT Site visit on Tuesday, November 20, 2001 by Sangesland and Vought at 5:00pm. Spill of 10 gallons to basement floor of Pam Pam Boutique. When arrived on-site Ferrantino had put down speedy dry on an approximately 7' x 7' saturated area of basement floor (rug on top of tile on top of concrete). Source of oil was loose connection in vent pipe indicating overfill. Ferrantino performed actual clean-up on Wednesday, November 21 consisting of sweeping Speedy Dry, removing carpet and inventory (cardboard boxes) which had soaked up oil. No cracks or drains evident therefore there was no impact to the outside environment. Residual contamination in drywall and floor studs causing odors to remain resulting in suggestion to call insurance company however since the spill was cleaned no further action is necessary.

DEC Memo:	4/24/19-Lin-According to Nick, they have been receiving many false complaints recently possibly link to disgruntle employee that was let go. 5/3/19-Lin-Visited site on 5/2/19. Hydraulic oil leaking from cylinders due to bad seal. Contaminated soil/debris found underneath cylinders. Concrete found underneath the contaminated soil/debris. Pads were put down near spill area by the elevator pit. Gauge on hydraulic tank does not work. 5/7/19-Lin-Hydraulic gauge fixed. Received letter from elevator maintenance and modernization provider stating that they have inspected the elevator and deem the elevator to be safe for operation. The soil/debris turned out to be quick dry materials that were removed. Receive picture of post cleanup showing the exposed concrete. They will put down a fresh blanket of quick dry in the pit. The piston and seals have been compressed. They will continue to monitor and will schedule for replacement if needed. Hydraulic tank gauge was fixed. They will keep a daily log of the oil level and have it available for inspection. Letter and post clean up picture uploaded to D2. 5/9/19-Lin-Recieved email from Nick stating that they expect DOB to perform inspection on lift #2 on 6/14/19 and lift #1 on 8/30/19. The full mechanical modification they are going to perform on the truck lift include replacement of seals, pumps, controls, and motors. Jordan: 646-891-3524 Building manager: Nick

DEC Memo:	tenant of building reporting bluish liquid surrounding generator. Pic does show bluish substance. DEC Kim dispatched to investigate. 11/14/22 - Kim - On 11/12 I arrived at the site of the reported spill at 1:20pm. I called the tenant of the building that reported the spill and was able to get access to the generator through Cafe Bilboquet. The manager of the cafe guided me through their basement and showed me to the generator. I inspected the liquid underneath and around the generator. There was no detectable odor. I touched some of the liquid on the platform and ladder by the generator and it was not slick. Upon closer inspection, it was apparent that it was just water, either from the rainstorm the day before or possibly condensation surrounding the generator equipment. Using my PID meter, I did not detect any readings. No spill

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

DEC Memo:	12/18/23- Kim - Desk Duty - I called NYCDEP ECC 12/17/23 and confirmed with NYCDEP Castro that he responded to the site. The spiller was given a NYCDEP Commissioner's Order to clean up the spilled oil. Spill case assigned to DEC Ye for follow up. 12/19/23 - Ye - Field Duty - Discussed with DEC Kim on 12/17. The spill was reported early 12/17 but occurred 12/16 at 5pm. FDNY reported to DEP, and DEP reported to the Spills Hotline when they confirmed in the field. An update was provided by Con Edison 2 hours later regarding 50 gallons #2 fuel oil found on water in one of their manholes - EMIS 294739. According to the EMIS, TRC Company was contacted to perform cleanup with Clean Harbors. A number for TRC (Nancy) and the building (Wilson) was provided. Received photos from DEC Kim, from the DEP, showing a spill on the sidewalk and street covered with absorbent. Caution tape and traffic cones had been put out around the spill area, impacting a No Standing lane. Called Wilson and TRC on 12/17 and left a message. Heard from Wilson later, who said that the building was doing upgrades that had been approved by DOB. They were performing a test on one of their generators and pair of wires had been mislabeled, causing oil to overfill a tank, coming out the vent to the street and through a valve to the basement. No alarms were triggered. They were not entirely sure, but believe a member of the public called the spill to

STRUCTURE (Continued) **S131510994**

FDNY, and the building owners
hired TRC and Clean Harbors. They have fixed the wiring and control system, and completed cleanup
on the street and in the basement around 2 hours ago (~7am). Con Edison came to take sampling in
their impacted structure, and will return to pump out their structure. There are no odors in the
building. Requested before and after photos and owner information. Received photos later showing
the spill cleaned. They did not receive any reports yet from the environmental consultant or the
cleaners, but expect something tomorrow and will forward it to DEC and DEP as soon as they receive
it. They said there are no floor drains in the basement where the fuel oil tanks are located, the
tank that overfilled was Tank #3, and at that point they do not have an estimate of how much oil
had spilled. Nancy Padilla, TRC - (908)-956-5136 Wilson Patinho, Facilities Infrastructure,
Bloomberg Co. 609-752-1199 pwilson95@bloomberg.net Building Owner Representative: Jessica Lopez,
Vornado JLopez@vnolcom 12/26/23 - Ye - Heard from Nancy on 12/18. They said they thought that there
was already a DEC spill number; I said we didn't get notified until after midnight. Requested an
estimate of the amount spilled, cause of spill, and disposal information in the report. Reached out
for an update on 12/20. Wilson said they're still working with their consultants and vendors to
receive their official reports. They later sent a preliminary service report, asked if we had a
timeline to receive documentation, and included their environmental consultant contact: Judy
Brummer-Jecko T 908.988.1748 - C 973.919.6661
Jbrummer-jecko@trccompanies.com The report
description of spill said that the spill was discharged from air vents on the building located on
the corner of 58th Street and 3rd Ave due to a valve malfunction and overflow in the pump room.
Clean Harbors used absorbent pads and simple green to clean and staged 8 drums in the storage room
on LL3 for disposal. Cleanup was completed by 0500 on 12/18. Called Wilson, who said that fuel was
discharged from the tank vent pipes, not air vents, and the building was continuing to mitigate
odors by using a carbon filtration system, which was why they didn't have a final report yet. They
were upgrading their tanks with a fuel polishing system and the spill was caused by a valve
misalignment. Two tank rooms were impacted because the vent pipe passed through those rooms from
the street. They said they will be on vacation next week. I said there is no rush for the report
and to include an estimate of the amount spill, corrective actions to stop the spill, and disposal
information. 2/1/24 - Ye - Heard from TRC, who said they were still waiting for disposal documents

STRUCTURE (Continued) **S131510994**

and have to perform 1 more visit to check the air levels in the basement. They had a scrubber in 1 spot where cleanup was hard to reach in the columns. They said the levels were almost down to normal. They had received a NYCDEP number as well, and will send the report to both departments to review when completed. They hope to have the report by the end of February. I said they could provide an update then if they're still working on the report or waiting for documents. 5/24/24 - Ye - On 3/11, TRC provided a closure report. DEP had issued Commissioner's Order 72616 for the building to clean up the spill. The cause of the spill was due to a misalignment on the valves for the return and supply lines. From the report, This misalignment was caused by the incorrect electrical termination of the control wiring conducted as part of an enhancement upgrade to the fuel oil system in the building. Clean Harbors and TRC added absorbent and collected contaminated material into 6 55-gallon drums. Pads were placed in the 2 impacted rooms, and the floors, tanks, and ceiling piping were washed with simple green. The waste that was generated from the cleanup was disposed of at Spring Grove Resource Recovery Inc. of Cincinnati, Ohio. It's estimated that approximately 80 gallons of No. 2 fuel oil was discharged to the asphalt road, concrete sidewalk, and a Con Edison utility grate and vault in the road. TRC performed an indoor environmental quality assessment for the building. Manifests were provided for 9 drums of fuel oil-contaminated material that were shipped on 1/4/24 and received by Spring Grove Resource Recovery on 1/19/24. Another 7 drums of fuel oil-contaminated material were transported by Clean Harbors on 2/22/24 and by a second transporter - SJ Transportation - on 2/28/24, to Spring Grove, which received the drums on 3/2. An Indoor Environmental Quality Assessment was performed over a 2-week period from 12/20/23 to 1/3/24. Some product had entered through the facade of the structure and back into the fill pipe enclosure/column, impacting a Tempur-Pedic store on the ground level and Home Depot underneath. The Tempur-Pedic, Home Depot (LL-1), Bloomberg warehouse (LL-2), and Bloomberg/Vornado tank room and office spaces (LL-3) were screened while central HVAC equipment were running (under normal operating conditions). On 12/20/23, there were PID readings of up to 1 ppm in the Tempur-Pedic. Crews were unable to access the cavity between the exterior block and window(s), but product was noted behind that area. The readings dropped after leaving the front door open, so it remained open for the remainder of the workday. In LL-3, it was discovered that the air source was dispersing vapors through the rest of the floor. The source was shut down, and

STRUCTURE (Continued) **S131510994**

the readings decreased from
~4.5 ppm to 0.5 ppm. Vapors were still present in the Director of Facilities Office, and it was
believed that there was vapor condensation/cross-contamination for the recirculating plenum unit
that drew air from the air supply vent. On 12/21, readings remained low in LL-3, except in the
Vornado tank room, which was cleaned again by Clean Harbors but still had readings of 8-10ppm. On
12/22, the Tempur-Pedic space by the window was cleaned, and readings dropped from ND to 0.6 ppm.
In LL-1, readings ranged from ND to 0.4 ppm. No readings were performed in LL-3 due to lack of odor
complaints and prior ND readings. On 12/27, readings were ND to 0.3 ppm in the Temper-Pedic and up
to 7 ppm within the stainless steel column wrap. In LL-1, readings were approximately 0.4ppm across
the entire mezzanine level, but fuel oil-type odors were only noted in a pocket of the southeast
corner. In LL-3, no readings were noted, including in the Chief of Engineer's office space. The
Bloomberg and Vornado tank room had readings from 0.7 to 1.8 ppm. On 1/3/24, readings stayed the
same, with up to 7 ppm still present within the stainless-steel encased column. Recently installed
carbon adsorption air filtration units were removing residual-level VOCs from the retail floor
area. The IT/server room and mechanical room on LL-1 were investigated, and readings in the
mechanical room were 1 ppm, due to outside air mixing through the corner column from the air
intake. Readings in the IT room were 0.2ppm directly below the air supply vent. There were no odors
in LL-2 nor changes in LL-3. On 1/30, readings were 1.7ppm behind the corner steel column
enclosure. Trace levels of VOCs were coming through the radiator enclosure west of the column and
were presumed to be migrating from the exterior sidewalk/building slab interface. The 3 Austin Air
charcoal air scrubber units were working as intended to remove trace level VOCs. In LL-1, VOC
readings were under 1 ppm except in the interior column, where readings were 3.5ppm. on 2/8,
readings were the same on the ground floor. In LL-1, readings were 2-3ppm in the exhaust from the
interior column, but readings remained low, ~0.2-0.35 ppm. The consultant recommended that the air
scrubbers continue operating while trace sources continue to dissipate; the SE corner column should
be rebuilt and reinstalled to be sealed with a suitable caulk to minimize passive air entry points;
the LEV machine in the mechanical room should be reinstalled to meet applicable building codes.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
